DETAILED ACTION

Claim Objections

1. Claim 16 is objected to because of the following informalities: "other" should be "another". Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-8, 10-15, 17 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Matsuda et al. US patent number 5075623 (hereafter Matsuda). Taken as a whole, this document teaches all limitations of the present invention. Specifically, Matsuda column 2 lines 22-52, teaches the claimed exposure method, which is further explained in figure 2 and column 3 lines 40-64. The act of placing said wafer on a wafer stage is inherent to the present invention as it is the fundamental method of delivering the shown sample (reference numeral 1) to its location for analysis.

4. Claims 11-13 are the apparatus inherent to the claimed exposure method and additionally claims 14, 15, 17 and 18 are the fabrication method inherent to the exposure methods practice.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 2881

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 9 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsuda.

Matsuda discloses the claimed invention except for the replacement of wafers on the substrate holder. It would have been obvious to one of ordinary skill in the art at the time the invention was made to make such replacements, since it has been held that mere duplication of the essential working parts of a device, in this case the wafers, involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8.
